Brambleloop tester record -- Hexagon Coaster Set (4)

hexagon-coaster-set@1.2.0 content 3754ed17a63b790d scope: full_make size: set_of_four
This sheet covers exactly one size (set_of_four). Another size needs its own sample and its own sheet.

your tester reference _____

coasters made (of 4) _____

grams used, colour A (cream) _____

grams used, colour B (wine) _____

ball band: grams per ball _____

ball band: metres per ball _____

hook used (mm) _____

swatch: stitches per 10 cm _____

swatch: rounds per 10 cm _____

across points, furthest coaster (cm) _____

across flats, same coaster (cm) _____

all four: points x flats (cm) _____

all four lie flat? yes/no _____

total hours (all four) _____

followed exactly? yes/no _____

anything unclear or wrong (round numbers) _____

Protocol

1. Weigh each full ball; record the ball band (grams and metres)
2. Work a 10 x 10 cm sc swatch; record stitches and rounds per 10 cm and the hook; then RE-WEIGH each ball and use that as its start weight, so the swatch's yarn is not counted as project yarn
3. Make all FOUR coasters exactly as written; note every guess, re-read or rip-back by round
4. Weigh what is left; grams used = re-weighed start minus end, per colour, for all four
5. Measure each coaster across the points and the flats, flat on a table, unstretched (cm)
6. Lay each coaster on a flat table: does it lie flat? If one cups (edges lift) or ruffles (wavy edge), answer no and say which in the problems box
7. Record total hours (all four, not the swatch) and whether you followed it exactly
8. Photograph in daylight on a real surface; keep every camera file UNEDITED (no filter, crop, resize or retouch), landscape or square, at least 2000 px each side, with space around
9. Shots: (1) all four laid flat in a 2 x 2 group, three-quarter angle -- the listing's first photo; (2) one coaster side-on at table level, not pressed down; (3) a ruler across the points; (4) close-up of a corner and the contrast round; (5) a mug on one coaster
10. Return sheet and photos; the operator enters them (POST /api/physical-test, /api/physical-photo)
